/Robert B Mondesi/			
Supervisory Patent Examiner, Art Unit 1645			

Continuation of 3. NOTE: claim 1 is proposed to comprise a pharmaceutically acceptable carrier which it has not previously recited; additionally claim 28 depends from claim 1 and recites the same combination of component elements which raises a new issue after final.

Continuation of 11. does NOT place the application in condition for allowance because: The obviousness type double patenting rejection traversal states peptidoglycan as not being ribitol teichoic acid of S. aureus, it is the position of the examiner that Figure 1 comprises the petpidoglycan backbone and the antibody of the claims may bind to any portion of the molecule of Figure 1 which is proposed to be incorporated in to claim 18. Additionally the allowed claims include antibodies that will bind to D-alanine and GlcNAC (N-acetylglucosamine) which are component parts of the ribitol teichic acid shown in Figure 1. See office action dated 12/31/2008. Additionally, the amendment of the claims raises new issues after final and therefore not entered.

Continuation of 13. Other: the proposed amentment of the Brief Description of the drawings to recite the phrase "such as" is not supported by Figure 1 which does not define a genus of genes, but specifically and positively recites the terms TagO and DItABCD.
